

**ODOURS**

Air Conditioning in cars has greatly improved our quality of life. Nowadays more and more vehicles are being supplied with air conditioning systems as standard. Unfortunately, odours from mould can sometimes spoil our pleasure.

# Freshen your air conditioning system with **AIR CO CLEANER**

**FUNGI**

These odours are the result of growth of mould and fungi in the evaporator, usually after the air conditioning system has been inactive for a period of time. The evaporator works like a fridge, cooling the incoming air. The presence of water, inaccessibility and low temperatures encourages the rapid growth of bacteria.

**FOAM**

Air Co Cleaner is a foam with excellent cling for sustained anti-bacterial action. The foam does not contain chlorine and will not harm aluminium or plastic surfaces. Application is simple thanks to the extension tube.

**SPEED**

Treatment of the evaporator and air intakes takes less than one hour. Air Co Cleaner contains alcohol-free, low odour solvents, allowing the car to be returned to its owner in the shortest possible time since there is no risk of intoxication from the fumes.

**SATISFACTION**

Due to its effective and long-lasting anti-bacterial action, Air Co Cleaner allows you to fully enjoy the advantage of an air conditioning system in your car.
